PROFILE SUMMARY

A results-oriented software engineer with strong expertise in full-stack development, dedicated to crafting seamless user experiences and robust backend solutions. Skilled in designing and deploying scalable applications, with hands-on experience across technologies. Proven ability to collaborate effectively in dynamic team environments, as demonstrated in successful projects. Adept at clear communication, fostering a culture of knowledge sharing and teamwork to deliver impactful results. Passionate about solving complex challenges and continuously enhancing systems to meet evolving user needs. Ready to bring a collaborative and innovative mindset to drive success in a software engineering role.

KEY SKILLS

- Excellent teamwork and collaboration.
- Clear and effective communication
- Problem-solving and critical thinking
- Leadership and project management
- Adaptability in dynamic environments
- Creativity
- Software Design / Development skill

PROJECTS AND CONTRIBUTIONS

Question Genius - Exams Preparation System for students

09/2024 - 10/2024

The Exams Preparation Engine is a unique and systematic tool designed to assist students in their academic pursuits by helping them study and prepare for exams.

- Led the development and implementation of a tool that generates exam-like questions from PDFs, text files, and images, enhancing academic preparation for students.
- Leveraged Reactjs, Express.js, Tesseract.js, and PDFParser libraries to process content into study-ready material.
- Successfully tested the tool with positive results for PDFs containing text, images, and standard documents.
- Implemented feedback-driven iterations, receiving requests for the tool to go live for broader student use.
- Overcame technical challenges, including fixing inconsistent JSON outputs from the AI model (Gemini) and optimizing hosting for speed and efficiency using Vercel and Render
- Directed a collaborative team, employing Git for version control and ensuring seamless project delivery.
- Future plans include improving character recognition speed, handling complex image-based PDFs, and exploring handwriting support.

Travel Planner - A system for planning travel trips

09/2024

Developed a travel preparation tool with Python-Flask and React.js to provide essential travel insights, including weather forecasts, recommendations, and budget planning.

- Integrated APIs; Gemini, OpenWeather and Google Maps for analytical weather data, location and location-based recommendation to enhance user travel experience.
- Handled API integration, routing and retrieving weather data based on user location requests.
- Recognized by ALX for creativity and suitability, leading the team to the next stage of the SEFaceOff Cup
- The tool will be scaled to support a global user base and deployed to ensure accessibility for users worldwide.

- Contributed to the development of a browser productivity extension using JavaScript, designed to enhance focus and reduce tab clutter.
- Worked specifically on implementing background tab functionality, ensuring idle tabs are tracked and managed efficiently.
- The tool automatically closes idle tabs after a user-defined time interval, with customizable timer settings for user flexibility.
- Collaborated with the team to deliver a seamless browsing experience, promoting productivity and effective tab management.

Astrics - Astronomical Pictures Content Management

04/2024 - present

A web application designed to spark curiosity and provide easy access to stunning daily images of space from NASA's Astronomy Picture of the Day (APOD) API. Accompanied by scientific explanations, it serves as an engaging and educational platform for students, space enthusiasts, and anyone intrigued by the wonders of the universe.

- Developed a full-stack web application leveraging NASA's APOD API to present daily astronomy images alongside detailed scientific explanations.
- Designed the app as an engaging educational resource for students and space enthusiasts, fostering interest in astronomy.
- Initially deployed on Render, enabling users to access content seamlessly during the trial period of the database service.
- Encountered deployment challenges due to the expiration of Render's free trial; currently exploring alternative hosting solutions to ensure long-term availability.
- Continually improving and refining the application with plans to scale features, make it more interactive, and incorporate social elements for enhanced user engagement.

EDUCATION

Software Engineering

African Leadership Experience (ALX)

Bachelor of Engineering, B.Eng

Mechanical Engineering, University of Uyo

EXTRACURRICULAR ACTIVITIES

- Drawing
- Reading
- Traveling
